DEVELOPMENTAL STAGE: Expressed throughout embryonic, larval, pupal, and adult development. Expression throughout the embryo followed by a restricted pattern of mesodermal expression that later confined to the visceral mesoderm, gonads, gut, and salivers that the confined to the visceral mesoderm.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           glands.
SIMILARITY: Contains 1 RNA recognition
SIMILARITY: TO VERTEBRATE PROTEIN LA.

                                          embryos.

PTM: Phosphorylated (Probable).

MISCELLANEOUS: There are two forms of La, LaA and LaB, in SIMILARITY: HIGH, TO MAMMALIAN LA PROTEIN.

SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                     FUNCTION: La protein plays a role in the transcription of RNA polymerase II. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

SUBCELLULAR LOCATION: Nuclear (Probable).

DEVELOPMENTAL STAGE: Barely detectable in stage I/II oocytes, accumulate in stage III/IV oocytes, then exhibit a roughly
                                                                                                                                                                      constant steady state level

PTM: Phosphorylated (Probable).

PTM: Phosphorylated (Probable).

MISCELLANEOUS: There are two forms of La, LaA and LaB, in SIMILARITY: HIGH, TO MAMMALIAN LA PROTEIN.

SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.

                               PUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.55, 55, 75
  polymerase III tra
of RNA polymerase
and 7-2 RNAs.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           14

                                                                                              "Isolation of rat cDNA clones coding for the autoantigen SS-B/La: detection of species-specific variations.";

Gene 126:265-268(1993).

-I- FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         use

SUBUNIT: Interacts with DDX15.
SUBUNIT: Interacts with DDX15.
SUBCELLULAR LOCATION: Nuclear (Probable).
SUBCELLULAR LOCATION: Nuclear (Probable).
PTM: PHOSPHORYLATED. THE PHOSPHORYLATION SITES ARE AT THE C-TERMINAL PART OF THE PROTEIN.
PTM: The N-terminus is blocked.
DISEASE: Sera from patients with systemic lupus erythematosus often contain antibodies that react with the normal cellular La protein as if this antigen was foreign.
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                        GO:0030529; C:ribonucleoprotein complex

It is most probably a transcription terminatifactor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor fof RNA polymerase III transcripts including tRNA and 4.5S, 5S
                                                                                                                                                                                                                                                                                                                                                                                                                                  SWISS-PROT entry is copyright.        Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Score

                               Pred. No. is the number of results predicted by chance to have a
score greater than or equal to the score of the result being printed,
and is derived by analysis of the total score distribution.

Primary structure determination of two cytochromes c2: close
similarity to functionally unrelated mitochondrial cytochrome C.";

Proc. Natl. Acad. Sci. U.S. A. 73:472-475 (1976)

-I- FUNCTION: CYTOCHROME C2 IS FOUND MAINLY IN PURPLE, NONSULFUR,

PHOTOSYNTHETIC BACTERIA WHERE IT FUNCTIONS AS THE ELECTRON DONOR
TO THE OXIDIZED BACTERIOCHLOROPHYLL IN THE PHOTOPHOSPHORYLATION

PATHWAY. HOWEVER, IT MAY ALSO HAVE A ROLE IN THE RESPIRATORY CHA

AND IS FOUND IN SOME NONPHOTOSYNTHETIC BACTERIA.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Rhodomicrobium vannielii.

"Mosquito homolog of the La autoantigen binds to Sindbis virus RNA.";

J. Virol. 70:1173-1181(1996).

-I- FUNCTION: May be involved in transcription termination by RNA
polymerase III. Binds RNA and DNA. Binds to the 3' end of the
minus strand of Sindbis virus RNA. This may be significant for
Sindbis virus RNA replication.

-I- SUBCELIULAR LOCATION: Nuclear. Primarily nuclear, but significan

                                                                                                                                                                               MOI. Biol. 231:196-204(1993).

FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts (By similarity).

SUBCELLULAR LOCATION: Nuclear (Probable).

DEWELOPMENTAL STAGE: Barely detectable in stage I/II oocytes, accumulate in stage III/IV oocytes, then exhibit a roughly.
                                                                                                                                                                  constant steady state level

SUBCELLULAR LOCATION: Nuclear (Probable).
PTM: Phosphorylated (By similarity).
SIMILARITY: Contains 1 RNA recognition motif (RRM) domain.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor form of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         11

                                                                                                                                                                                                                     nitted (OCT-1996) to the EMBL/GenBank/DDBJ databases. FUNCTION: La protein plays a role in the transcription of RNA polymerase III. It is most probably a transcription termination factor. Binds to the 3' termini of virtually all nascent polymerase III transcripts. It is associated with precursor forms of RNA polymerase III transcripts including tRNA and 4.5S, 5S, 7S.
